One click on top switch turns on badge

Second click activates bluetooth search.

Second switch is for brightness of LED

You get longer battery life if operated at lower light

Long press and hold with each click lowering through three

Intensity variations

On your smart phone, scan the QR code for your O/S and follow prompts to load app

Once connected open app on your phone.

Touch number one of the options which will have HELLO pre-entered

Tap Hello and it will open the message set up page - delete Hello and type your message or name

Leave speed at 5 unless you want it faster or slower

SHOW mode is default to scrolling to left but touch arrow and you get 8 other options for display depending if you are doing a sentence or just one word.

Single short words are effective with any of the options. Sentences are best seen as scrolling to your left

The **FLASH** option will flash your words off and on continuously

The **LOOP LAMP** will put a frame or rotation of dots around your screen

Once all is set up press return at the top screen then send at the bottom.

If the badge does not refresh straight away press the on button and restart and new message will download!

A program can be downloaded for WINDOWS PC's at <https://www.lesun-led.com> but none for apple Macs
