

BICYCLE BOXED SET KIT

This set comes with all track components* for a circuit with two bicycles including both a male and female cyclist plus track magnets. Motor is set to medium speed.

SLIDER BOXED SET KIT

This set comes with all track components* and enables you to create a layout using your own vehicles or boats.

Motor is set to fast speed

Set Includes: 8 vehicle sliders for HO, TT, N, Z.

38 various scale magnets

Drill Bit (to help you with the attaching of sliders to your vehicles)

*Track Components

Boxed set kits come with track components to make up to 225cm of track and includes:-

- ♦ 2 return loops
- ♦ flexible guide rails
- ♦ drive module
- ♦ 12V DC motor

BICYCLE KITS

PAIR OF CYCLISTS

Kit for an HO female and a male cyclist, including magnets. Assemble and paint to your requirements.

HYBRID CYCLIST

This HO scale unit is a male recreational cyclist, including magnets. Assemble and paint to your requirements.

CARGO BIKE

Old fashioned HO cargo bike with tray in front. It can be decorated for grocery or bread delivery, flower or souvenir selling - what ever you can imagine! Includes magnets. Assemble and paint to your requirements.

READY TO RUN

These HO scale bicycles come assembled and pre-painted ready for your layout.

They include magnets for track placement.

PLEASE NOTE THAT DUE TO LIMITED PRODUCTION YOU SHOULD CHECK AVAILABILITY ON OUR WEB SITE FOR THESE RTR UNITS.

FOR PEOPLE
WANTING A
LITTLE
MAGNORAIL
ON THEIR LAYOUT

Start with our kits, add pedalling cyclists and build up to vehicles or boats of your choice!

THE FUTURE IS MAGNORAIL

Frequently Asked Questions

What scales can the Magnorail System operate in?

As the drive power is under your roadbed you can place any of your own vehicles in the following gauges: TT, Z, N and HO with magnets supplied in the Boxed Slider Starter Kit.

Are the bicycles available in all scales?

No. The kits and Ready to Run (RTR) bicycles are only available in HO Scale.

Do the Ready To Run Bicycles come in starter kits?

No, the RTR series are only available as separate items.

Can I buy cyclist kits separately?

Yes, the cargo, tandem, 2 riders (M&F) and sport bikes are available in kit form.

Can I fit the Magnorail System to my existing layout?

Generally it is difficult to retrofit the Magnorail System as the drive mechanism needs to be embedded under your layout's roadbed. However with a bit of creative thinking, systems have been added to the inside of a layout.

- ♦ By way of a single track in front of the back board, then exit behind some scenery, run along the inside of your back board and reappear further along from behind a structure or bush.
- ♦ Add an extension to the front of your layout with a small return loop.
- ♦ Add a pond or lake in a "dead" section with pedal boats, ski boats, swans or rowboats.

Check out our YouTube Channel and view the hundreds of Magnorail layout configurations for ideas: <https://www.youtube.com/user/klatchco56>

Can boats run in real water?

As the motive power is under the sea/lake bed, yes you can run boats on a properly sealed lake or river with a film of water - you just need the magnets to be inside the boat or waterproofed.

Can any vehicle be used with the Magnorail System?

Within reason, sliders can be fitted to most wheeled scale models. Once again you can be creative as to how you attach magnets - check out the videos.

The *MAGNORAIL SYSTEM* was invented and developed in the Netherlands in 2012 by a group of hobbyist engineers looking for that unique *special something* to bring to a model layout and make it available across a range of hobby scales.

Already aware of the Faller Car System with self-propelled cars and trucks they concentrated on bicycles, the most common form of transport in the Netherlands.

HOW DOES IT WORK?

The *MAGNORAIL SYSTEM* employs a finely engineered plastic channel and an interlocking chain system embedded with *rare earth* magnets.

The magnets can be placed in various sequences (of your choice) for a range of effects and spacing of the bicycles or vehicles, as they run across your road or water surface.

The chain flows through a drive section that presses on the side of the links and is powered by a 12 Volt DC motor. Vehicles seemingly roll unaided across the road and boats, jet skis or yachts skim across the water surface of your layout. The combination of the moving chain under the roadbed with embedded magnets pulling the bike along, allows the clear centre bicycle wheel to interface with the road surface giving the attached articulated legs the illusion (**MAGIC**) of riders pedalling their bikes!
